

OUR LADY OF VICTORY

Chapel Scheduler

One coordinated calendar for services, ministries, and communication

PLANNING MEETING · AUGUST 8, 2026

Proposal and proof-of-concept review

Goal: simplify chapel administration without sacrificing privacy.

Why change now?

The chapel is maintaining the same reality in several disconnected places.

1

Fragmented tools

Google calendars, Ministry Scheduler Pro, Telegram, spreadsheets, websites, and manual public listings.

2

Repeated work

The same service or change must be entered more than once—and each copy can drift out of date.

3

Low adoption

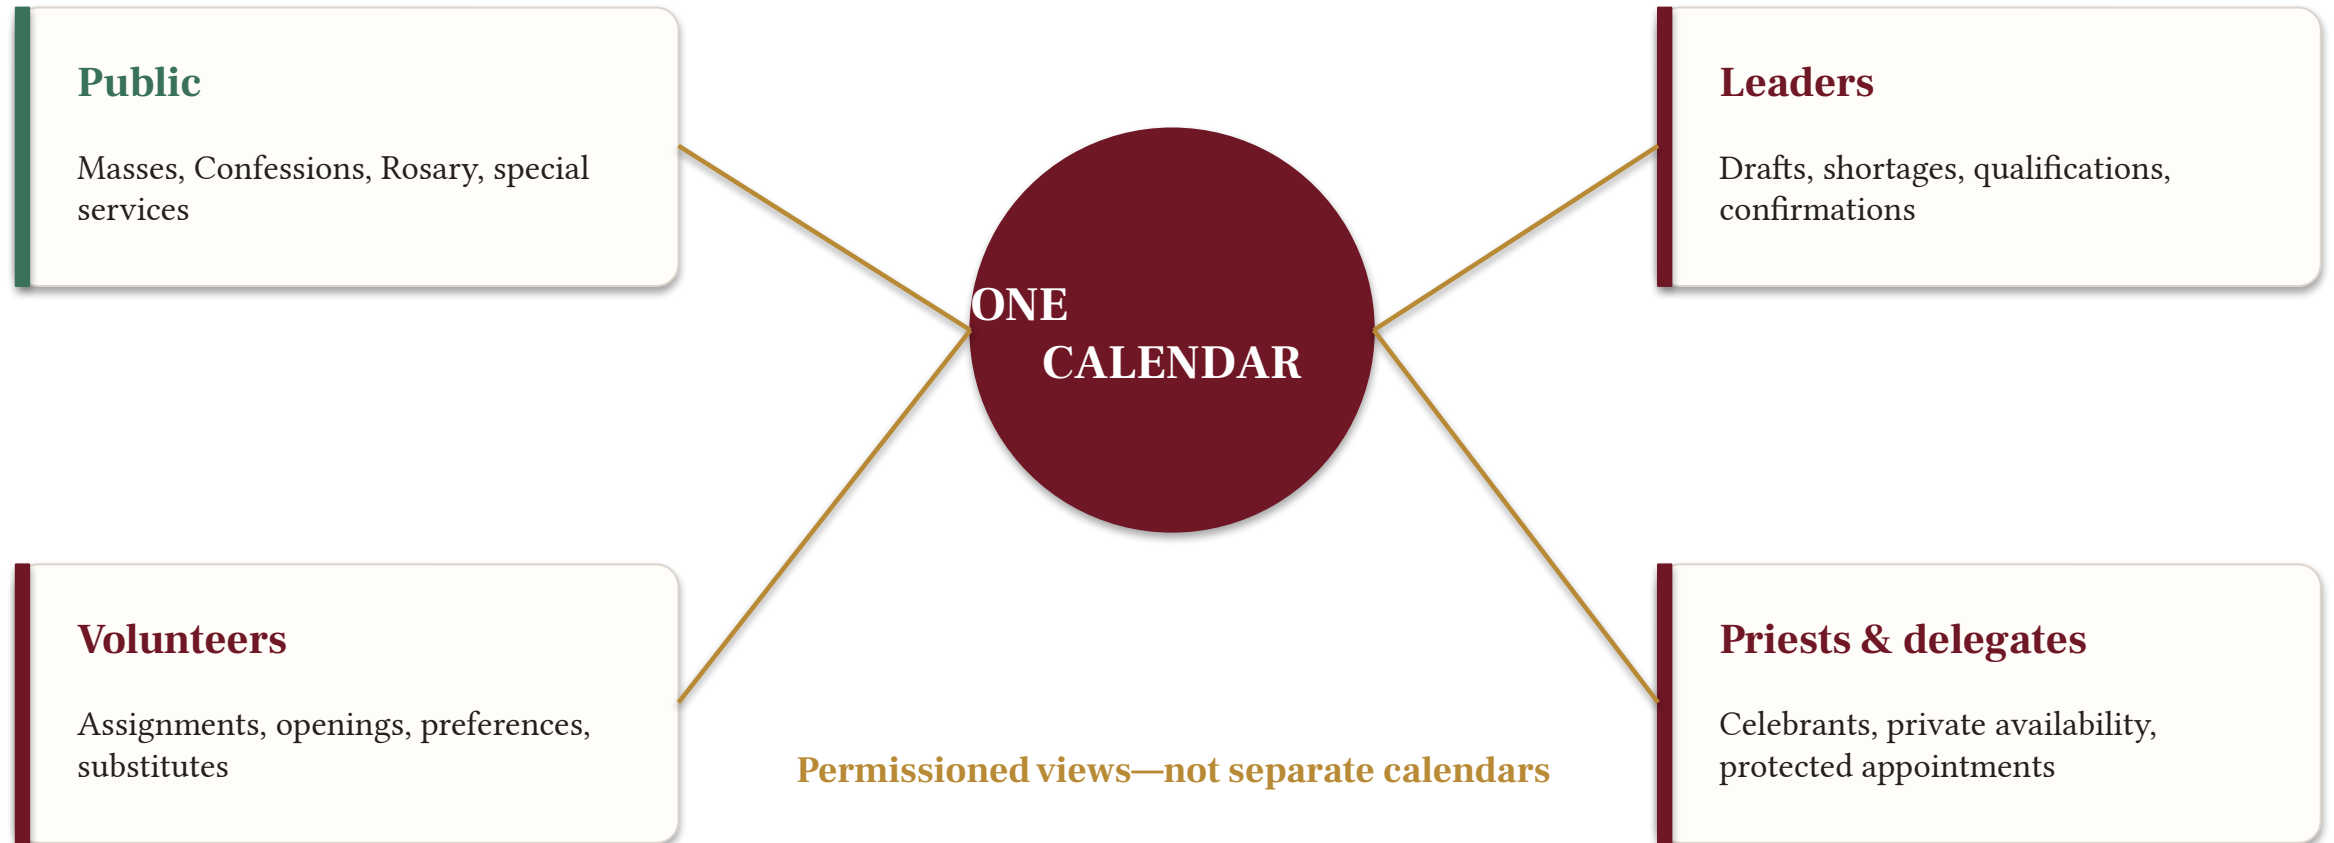

Volunteers already use messaging apps. A separate, cumbersome scheduling app is easy to ignore.

The practical result

More follow-up, more chances for conflict, and less confidence that any one calendar is current.

The proposal: one coordinated source of truth

Enter a service once; show each person only what they are authorized to see.

Simple for each person

The system becomes more useful after sign-in without becoming more revealing.

PUBLIC VISITOR

No account

Mass times and public service information

ACCOUNT HOLDER

Optional

Chosen alerts and visible ways to help

VOLUNTEER

Approved

Relevant assignments, openings, and instructions

LEADER / ADMIN

Authorized

Scheduling, exceptions, and oversight

Private calendars and APR details are invisible—not merely shown as locked tabs.

Make participation easy—but always optional

The public calendar can become the front door to communication and service.

1

Check the calendar

No account required

2

Choose updates

Every category opt-in

3

See ways to help

No commitment

4

Leader follows up

One-time or ongoing

Examples people would see

Liturgical ministries · League cleaning and meals · Maintenance · Events

A name is requested only when someone offers to help.

Less chasing; more predictable scheduling

Automation proposes. Authorized leaders remain in control.

The leader can always correct the draft; privacy and APR eligibility cannot be overridden.

Privacy first—by design

Collect less, separate permissions, and avoid exposing sensitive status.

Public

Services and public liturgical details only

No volunteer names or staffing counts

Minors

Birth year rather than full birth date

Guardian visibility and controls

APR

Eligibility metadata only

No reports, reasons, or signed forms by default

Father

Private details for approved delegates

Others see only unavailable

Convenience never grants broader access than a person's actual responsibility.

Start small: the sacristan alpha

A private, reversible test before normal chapel use.

IN THE ALPHA

- Public service calendar
- Secure sacristan accounts
- Preferences, absences, and balanced drafts
- Confirmations, reminders, and substitutes
- Administrator editing, printing, and history
- Email notifications and tested backups

NOT REQUIRED FOR ALPHA

- Replacing every existing calendar
- Altar servers, ushers, or other ministries
- Advanced APR document workflows
- Website and public-feed integration
- SMS or full Telegram automation
- Multiple chapels

Phased rollout

Each stage earns the next one through actual use and feedback.

Later: broader ministries, website feeds, priest coordination, and additional missions

What the proof of concept demonstrates

A visual test of workflows and permissions—not production software.

1

Public calendar

Services, Confessions, Rosary, and celebrant information

2

Optional signup

Notification choices and visible ways to volunteer

3

Ministry workflow

Openings, confirmations, preferences, and substitutes

4

Telegram concept

Ministry group versus private bot interaction

5

Leader review

Balanced draft, shortages, and overrides

6

Private calendar

Father's authorized weekly view and protected fields

LIVE DEMONSTRATION

What is needed to reach alpha

The technical work depends on a few timely decisions and inputs.

1

Stakeholders

Approve a private sacristan alpha and its permission boundaries

2

Webmaster

Hosting, subdomain, authenticated email, backups, and support approach

3

Pilot group

Eight consenting sacristans, roles, preferences, and known absences

4

Administrator

Service exceptions, test sessions, and rapid feedback during August

Current scheduling remains available throughout the alpha as a fallback.

The decision requested

Authorize preparation of a private sacristan alpha—subject to webmaster, privacy, and security readiness.

One chapel calendar. Less duplicate work. Easier participation.

QUESTIONS & DISCUSSION
